Welcome on Zekatel Company Website

The company was established in 1992. From the beginning the company portfolio is based on telecommunication technologies – PBX installations as well as creation and / or reconstructions of inner and outer telecommunication networks. Since 1994 we have been also installing structured cabling systems and optical networks. This portfolio has been extended for installations security, antifire and surveillance systems.

Selected Products And Services

Cabling Systems

Essential infrastructure element of modern computer network is well designed and professionally installed structured cabling system. We follow valid standards and recommendations during design and implementation phase for delivering stable computer networks. Our company is long term certified partner of **Nexans** Company.

More information...

Data Centers

Nowadays there is huge centralization of information systems what increases data center importance. Data centers (server rooms) are rooms with special access and environment ensuring neccessary data protection. In data centers there are stored pieces of information belonging to the most valuable company assets.
